

DocAgent for iSeries

e-Business Output Delivery System

Instant delivery to end users from the iSeries dramatically reduces postage, handling, and printing costs associated with printed output. As business demands for electronic documents grow over the next several years, your savings will increase proportionately.

Document distribution rule exception handling allows a phased-in implementation approach as employees, customers, and vendors indicate delivery preferences.

e-Document Security

DocAgent allows selective encryption of e-mail attachments to ensure that they are viewed only by the intended recipients. Passwords are securely managed on the IBM iSeries and exclusively associated with each individual e-mail address. The attachment cannot be viewed without first entering the recipient's unique password.

When DocAgent optionally routes documents to the DocAgent for Web system for Internet ("pull") viewing, the user must log in to a secure Web server to retrieve documents. The user is presented with a "tree" view of only the document categories that he or she is authorized to view. The user can then "drill down" to retrieve the required document based upon pre-established indexing and search criteria. (See the DocAgent for Web product sheet.)

Highlights

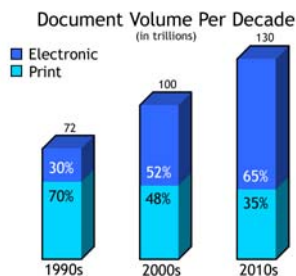

- *Electronically distributes IBM iSeries mission-critical documents and reports to any e-mail address or archive*
- *Rules-based engine for one-time setup of customer delivery preferences*
- *Selectable output format for each recipient preference*
- *Secure 128-bit encryption for protecting sensitive documents*

What is DocAgent?

DocAgent for iSeries is a business-rules-based solution which quickly and efficiently distributes high volume mission-critical documents and reports to trading partners and stakeholders via e-mail or secure server.

DocAgent Advantages

Enterprise application output is segmented and delivered directly to any e-mail box, almost instantly, ready for online viewing. The attachments are transformed into the universal Adobe Portable Document Format (PDF) which can be printed in perfect fidelity on any attached PC printer.

e-documents on demand

How It Works

E-Business document output is segmented and merged with electronic overlays by Digital Design's laser printing solution, FormServer. When internet delivery is specified, DocAgent converts the document to the Adobe Portable Document Format (PDF), attaches it to an e-mail message and immediately delivers it to any e-mail box in the world.

DocAgent also has an Application Program Interface (API) which receives a print file name and an e-mail address as input parameters and delivers print file as an e-mail attachment. This command can be run interactively or integrated into your application to provide electronic delivery output for existing jobs.

An OS/400-style user interface allows the selection of a particular application output file from a list for immediate interactive distribution.

A Passion for Excellent Service and Support

At Digital Designs we not only deliver the highest quality, most robust, and most manageable software solutions, but we also take great pride in our acclaimed customer service and support. Our world-class professional Software Solution Specialists are on hand to provide timely answers to your questions and help you get the greatest value from your software investment.

After hours, a hotline is available for any questions or challenges that may arise. Digital Designs' e-Care Center is also accessible to customers who prefer on-line knowledge base access, FAQs, helpful tips and techniques, and new version and documentation downloads.

Step Into the e-Document Future Today

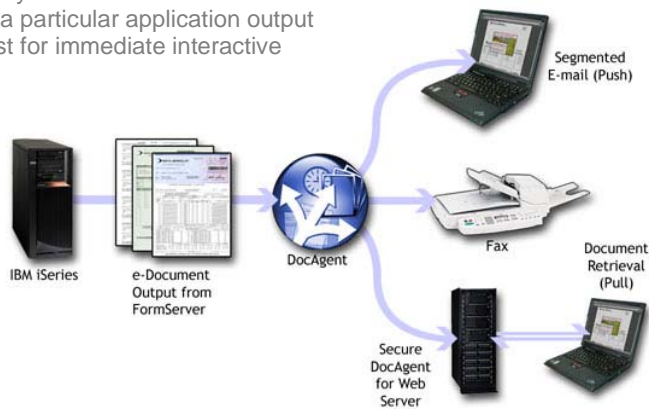

DocAgent provides an integrated solution approach that allows you to take immediate advantage of the savings in time, paper, and postage associated with e-business document management applications.

- Generate e-document output from enterprise business applications.
- Enable distribution to local and remote laser printers
- Deliver e-documents to individuals via e-mail attachment or fax
- Store e-documents on secure servers for intranet and Web retrieval
- Achieve breakthroughs in performance, efficiency and customer service.

Digital Designs can help make the process a smooth transition.
